25X1

1. The Research Institute for Light and Heavy Industry is located at the corner of Andor utca and Fehervari ut in Budapest. Although the buildings were completed in 1950, the institute did not apparently begin its work before the middle of 1951. Adjoining the institute on Andor utca is an internment camp for political prisoners, whose 500 to 600 inmates are employed by a nearby building-materials factory.
2. The institute consists of three buildings in an area approximately 300 x 800 square meters. Two of the buildings are two or three stories covering an area approximately 400 square meters. One is a storage depot and the other an administration building. The third building, although only one story, has the height of a three-story building, is built in the form of a large hall, and has approximately 2,000 square meters of space.
3. All buildings are of red brick with tiled roofs. A concrete and iron fence, approximately three meters high, was being built around the area in the middle of 1951.
4. A special railroad siding connects the main building with the nearby Kelenfold railroad station.
5. A porter and his family occupy a lodge near the entrance to the area.
6. Since only a small number of workers (15 to 20, mostly unskilled laborers) were observed to enter the area daily, it is believed that equipment was still being installed and that research had not begun in the middle of 1951.

- 2 -

7. The institute is to engage in research on the composition and technical characteristics of metals. There are neither chimneys, nor towers, nor tanks visible from the outside to indicate any use, production, or research with gases. Barrels and sacks of unknown content are stacked in the storage depot.
8. No trucks or freight cars have been observed entering or leaving the area during the day.
